

First Step:
Remove Headunit
(not explained here,
search forums for
guide)

Second Step:
Find the cable that
goes from the cd
player unit that
connects into radio.
Find the two cables
that convey the
audio (L and R). In
my case, it was a red
and white cable. In
my case, it was a
wiring diagram on
the bottom of my cd
player unit. Cut
each of the wires
halfway, and
connect a piece of
wire into each. You
should end up with a
red and white wire
coming from the
blue adapter shown
here and two others
from the cd player.
